

AKUFORM

AKUBOARD

-slagfast akustik opslagstavle

AKUBOARD is a 40 mm thick super absorbing wall panel which can be used as a notice board with pins. Is very effective in the whole acoustic range (400Hz to 2000Hz).

Standard colours are: Black, Grey and White. For other colours - please ask. Size: 130 x 130 cm, 130 x 145 cm and 130 x 280 cm. The frame comes in two shapes: The soft curved aluminium as AKUWALL 80 and the new modern look as AKUWALL 40.

AKUFRAME

- acoustic ceiling unit

AKUFRAME Classic is designed to optimize acoustics in rooms where wall to wall ceilings are not an option. The single units can be suspended in wires or mounted directly to the ceiling by a sophisticated clip-on system.

The distance between each unit can vary in respect of the architecture and demand for acoustic performance. The units will often be placed between existing lamps and/or fire sprinkling systems. The aluminum profiles provide flexibility and can be cut in special sizes.

Special acoustic feature: Place one or two AKUFRAME's in low height right above the individual workstation, and feel the power of turbo absorption. The acoustic performance is second to none.

Standard sizes: 130cm in width and 130/280 cm in height. Fire rating: class A. Thickness: 20/40 mm (Acoustic material). The colour is white.

All products are fire approved in class A and are allergy tested.

less noise, better life...
