

AKUWALL 80

# AKUWALL 80

*- the most efficient freestanding partition wall on the market*

AKUWALL 80 is the choice when it comes to acoustic efficiency in many aspects, and is the ultimate partition wall to divide open landscape offices in small and flexible sections. The wall is practically absorbing sound 100 % in all relevant frequencies (250 - 8.000 Hz). With a thickness of 80 mm compressed glass wool it also has a very high degree of sound insulation.

If transparency is requested, AKUWALL 80 will be provided with sections in acrylic glass in a "flutter free" angel, which means that the sound will be deflected to prevent short standing waves – also known as flutter echoes. The surface of the acoustic elements is designed to resist abusive treatment, and can be used as a pinboard.

Standard sizes: 280 cm in width and 185/245 in height. Fire and acoustic rating: class A. The colours are light grey, black and white.

Yes these walls are big but if the option is something else than a permanent construction, the AKUWALL 80 is without competition. It is easy to assemble and to move from one place to another.

*less noise, better life...*
